Power Forward

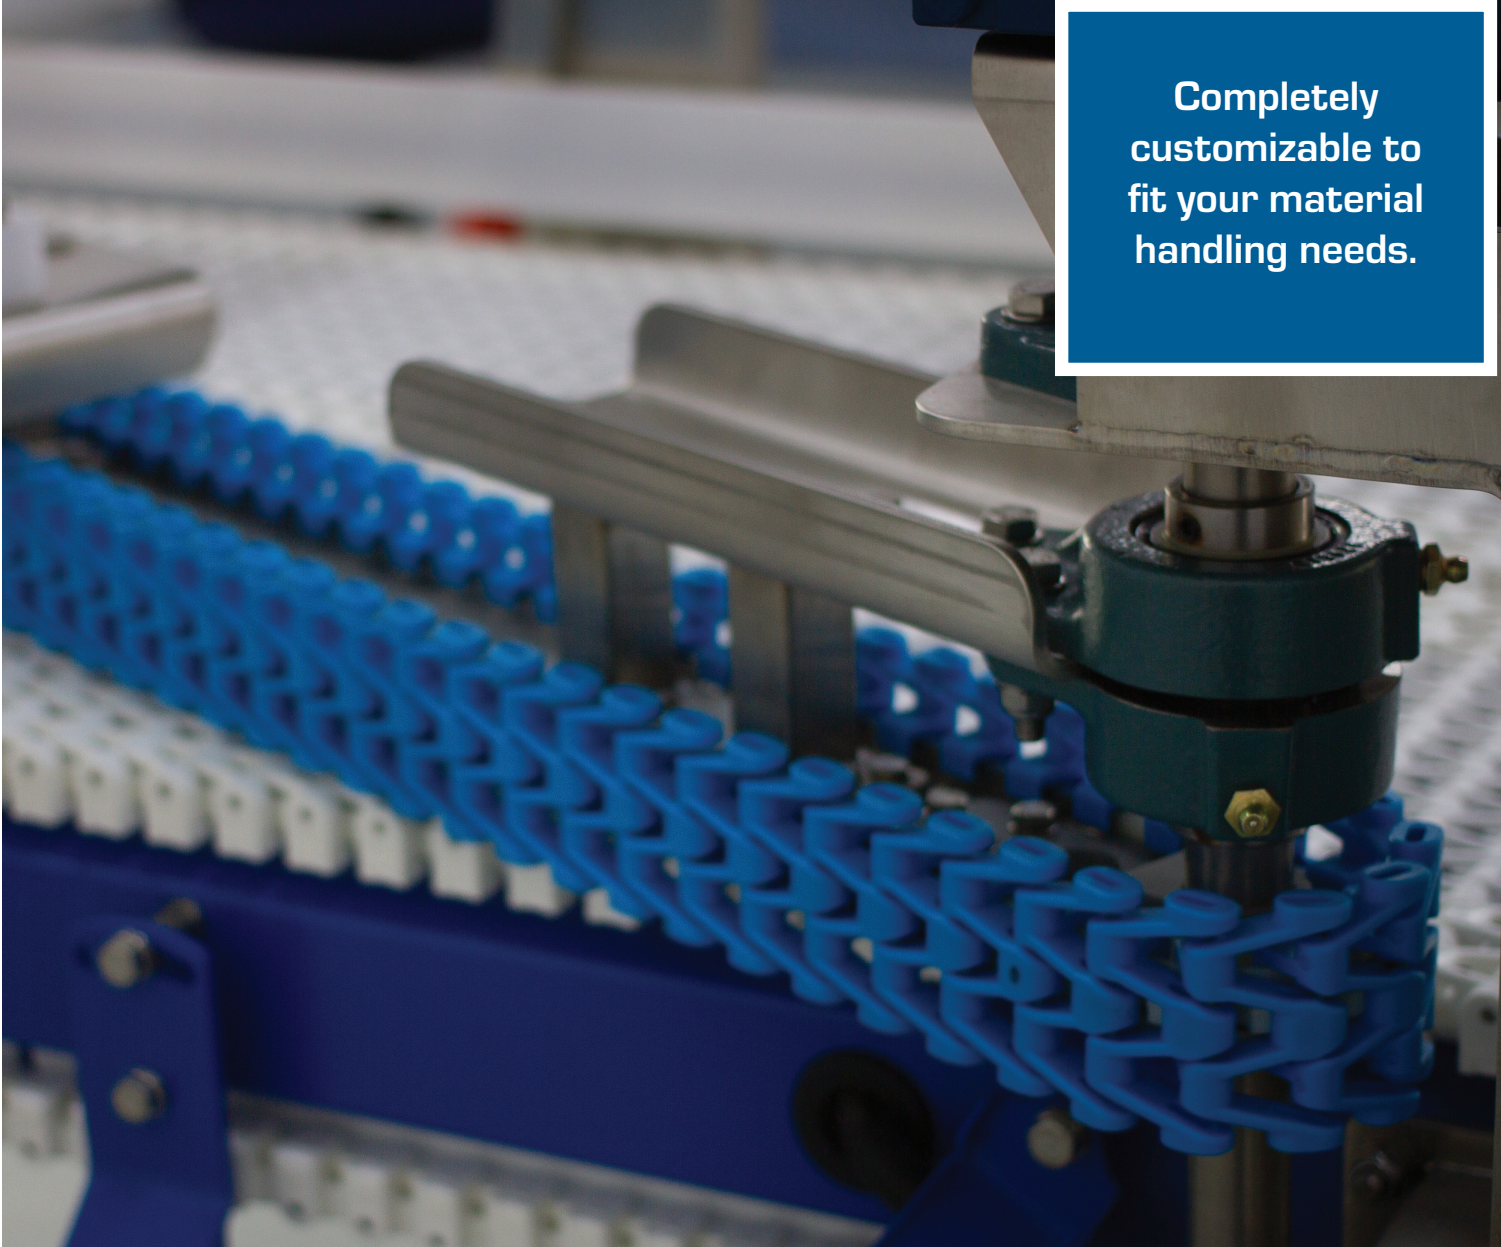

The Powered Divert helps product continue moving forward which alleviates accumulation issues.

Recommended For:

Food Production • Packaging • E-Commerce

Completely
customizable to
fit your material
handling needs.

The Powered Divert sorting and merging option is especially useful for non rigid items, such as bagged product. It is valuable for applications with a limited conveyor length, where standard, stationary divert rails would be too long to fit with in the available space. The powered divert helps the product continue moving forward which alleviates accumulation issues. The Powered Divert is a small conveyor turned at a 90° angle and suspended above the horizontal chain.
